
EXPERIENCE

CareerFoundry, Online*Full Stack Web Development Boot Camp.*

July 2023 – Jan 2024

- Completed a six-month boot camp, knowing zero to building fully functional websites. The boot camp focused on application rather than theoretical. The course is designed around projects, each focusing on a unique set of tools.
- Created a movie application that features my top 10 favorite movies. Users can sign up, log in, view more details on a movie, add/remove a movie to a favorites list, and search/filter movies. Designed a fully functional backend with my own API using MongoDB. Then created the front end of the app to receive the API info on the movies list. Added the finishing touch with CSS for styling.
- Repo: <https://github.com/HadRad500/MyFlix-Client.git>

Straight Arrow Flooring, West Covina, CA*Assistant Manager.*

April 2022 – April 2023

- Was in Sales, handled a showroom of flooring, countertops, cabinets

City Hall, Tustin, CA*Community Development Intern.*

Aug 2019 – Jan 2020

- Was Planner of the Day, dealt with 10 residents and developers on questions weekly
- Conducted 4 plan checks for additions on homes monthly

City Hall, La Palma, CA*Community Development Intern.*

Sept 2018 – June 2019

- Conducted plan checks for small homes and Accessory Dwelling Units
- Responded to Code Enforcement issues throughout the city daily

It's a Grind Coffee House, Cerritos, CA*Assistant Manager.*

April 2017 – July 2019

- Maintained day-to-day business operations, while managing 12 employees
- Worked as a cashier, food handler, barista

SKILLS

TechStack (MERN)*Focused on one language per project that was done in the boot camp.*

- Learned to build web applications with HTML, CSS, and JavaScript that load data from an external API and enable detailed viewing of data points.
- Developed a movie application, using Angular
- Used Node.js and worked with web server frameworks, REST Architecture, and databases to build an API from scratch.
- Routed HTTP requests with Express.
- Used CSS for styling all projects in the course.
- Implemented authentication and authorization using basic HTTP auth and JWT.
- Added business logic using Mongoose.
- Explored test-driven development while building a progressive web app.
- Used unit, integration, acceptance, and end-to-end testing for my app.
- Tools used during the course: Github, VScode, Postman.
